How to Trim Hedges

At planting cut tops back to 4 or 6 inches above the ground. Each spring the hedge can be trimmed back to the desired height and width. Frequent trimming during early summer will make the hedge grow dense. Trim both the sides and the top or else hedge will grow wider at the top and become open at the bottom.

Bulk's Hardy Roses

Roses—the mere name is an inspiration to garden lovers. Nothing can take the place of the Rose. Almost every home has room for at least a few. Roses will grow in any fertile soil, but are much improved in bloom, fragrance, and beauty by rich soil, liberal fertilizing, and good cultivation. Branches should be well cut back early each spring.

HOW TO PLANT ROSES

Roses prefer a good garden loam or clay loam with a plentiful supply of organic matter incorporated. Soils of this nature retain moisture well and roses like plenty of moisture but resent wet feet. Provide for drainage if the rose bed is located where water does not drain readily away.

TREE ROSES

Tree Roses are the aristocrats of the garden. Masses of beautiful roses on a straight slender stem. Choice of brilliant crimson (Crimson Glory or coral-pink (Countess Vandal). \$5.75 each.

A Most practical and effective home sprayer

Fruits

In the extremities of the lawn or upon the adjoining lot, plant fruit trees. They will bountifully reward you in the fruit they yield, which you will enjoy eating right from the trees or in the winter as preserves and jam. The fruit-garden can easily be made a part of the scheme for beautifying your property. Flowers along the walk to the orchard will brighten the way and provide blooms for cutting.

GUARANTEE

(In conformity with uniform guarantee as adapted by National Landscape Nurserymen's Association.)

Provided account is paid within 30 days, and plants have received reasonable care and protection, we will replace at one-half original cost all woody plants furnished and planted by us which fail to survive one growing season. Guarantee does not apply in cases of loss due to drought, severe winter storms, insect injury, seashore exposure, or factors beyond our control.

The customer pays the cost of delivery and planting of the replaced plants.

If plants to be replaced are out of stock, credit will be applied to other plants.

SPRAYING FRUIT TREES

For best results we recommend three sprayings: First, during the winter; second, after the blossoms fall; and third, about two weeks later. This will control the most prevalent insects and fungus diseases attacking fruit trees on Long Island.
